

SeaPhos

“Every granule is a blend of effective bio-stimulants and essential plant nutrients.”

Introducing...

fertco

SUSTAINABLE DICALCIC PHOSPHATE + **AGRISEA BIOSTIMULANTS**

SeaPhos was developed for ease of application being well granulated with 5%P 4%S 30%Ca and AgriSea biostimulants.

What is SeaPhos?

SeaPhos combines the minerals, trace elements, amino acids, vitamins, and growth promotants found in AgriSea's fermented New Zealand sourced Seaweed with phosphorus, sulphur and lime in an enviro-friendly granulated form.

Soil health is optimised

The liming effect of SeaPhos reduces soil acidity, while the biostimulants increase microbial activity in the soil.

Plant health and growth are improved

SeaPhos contains phosphate, sulphur and calcium, essential plant nutrients for plant vigour and health. The seaweed enhances uptake and availability of these nutrients and stimulates healthy root growth.

Environmental impacts are reduced

Because SeaPhos has dicalcic phosphate as its base, nutrient release is controlled, and environmental losses are reduced. Being granulated, SeaPhos can be spread safely and more accurately.

Nutrient Analysis

P₅	S₄	Ca₃₀	pH 6.6
----------------------	----------------------	------------------------	-------------------

Ocean Electrolytes

Availability

- 500kg
- 1,000kg
- Bulk

Storage Store in a cool, dry, well-ventilated place out of direct sunlight.

Suitable for pasture and a wide range of horticultural and agricultural crops.

A collaboration between
AgriSea NZ and Fertco Ltd

AgriSea NZ 0800 732 9333

SUSTAINABLE DICALCIC PHOSPHATE + **AGRISEA BIOSTIMULANTS**

SeaPhos was developed for ease of application being well granulated with 5%P 4%S 30%Ca and AgriSea biostimulants.

What is SeaPhos?

SeaPhos combines the minerals, trace elements, amino acids, vitamins, and growth promotants found in AgriSea's fermented New Zealand sourced Seaweed with phosphorus, sulphur and lime in an enviro-friendly granulated form.

Soil health is optimised

SeaPhos has a liming effect, so it reduces soil acidity. This in turn optimises the ability of the biostimulants to support a healthy, diverse, microbial soil population

Plant health and growth are improved

SeaPhos is a novel, two-in-one approach to improve plant vigour. On the one hand, nutrients like phosphorus, sulphur and calcium provide the basics for plant growth, while on the other, the biostimulants support the fungi and bacteria that drive nutrient uptake.

Environmental impacts are reduced

Because SeaPhos has dicalcic phosphate as its base, nutrient release is controlled, and environmental losses are reduced. Being granulated, SeaPhos can be spread safely and more accurately
